Crumb rubber ready to be transformed.

OUR COLLECTION NETWORK

In Ontario, tire producers and importers pay to collect and recycle used tires. Tires are picked up from collection sites, which are then processed into crumb rubber and other materials.

WHAT HAPPENS TO USED TIRES?

Processors separate tires into three main parts: Steel, fibre, and rubber. The steel gets recycled, the fibre is used as a clean energy alternative, and the rubber is used to make playground flooring, mats, and even paving stones.

Ryse Solutions Inc. is a Producer Responsibility Organization that helps the tire industry comply with regulations under the Ontario Resource Recovery and Circular Economy Act, 2016.
